Summary of Teaching Evaluations

Alain Maubert Crotte | University of Regina

The following is a summary of student evaluations from courses taught across the Faculty of Science and the Faculty of Media, Art, and Performance. Across all courses, my goal is to create an interactive, rigorous, and supportive learning environment.

Overall Highlights

- **Creative Technologies & Design:** In **CTCH/DES 312**, student evaluations averaged **4.3 out of 5.0**. Students consistently highlighted the instructor's approachability, respect for students, and ability to make complex topics accessible.
- **Upper-Level Project Courses:** In **CS 476** (Software Development Project), evaluations averaged **3.6 out of 4.0** for being well-prepared and communicating effectively. The real-world software project was the most frequently cited positive component.
- **Engagement and Practical Application:** Across physical computing labs (**CS 207**) and introductory courses (**CS 100**), students consistently praised the hands-on labs, live coding examples, and interactive activities as the most valuable parts of the course.

Selected Student Feedback

> *"Friendly, approachable, respectful, and capable instructor. Course is enjoyable and useful. Thank you!"* — **CTCH/DES 312**

> *"The best professor in the world! (from the bottom of my heart)"* — **CS 476**

> *"The practical thing, It is an opportunity to apply the theoretical concepts in a practical way."* — **CS 207**

> *"The instructor shows live examples of various code as well as present fun activities which are helpful in learning the coding concepts in a very easy manner."* — **CS 215**

Areas of Growth and Reflective Practice

I actively review student feedback to improve my course delivery and curriculum design.

- **Lecture Delivery and Pacing:** Early feedback in foundational courses (CS 100, CS 215) noted that the dense volume of material sometimes felt challenging to absorb within the class period. I have since heavily revised my approach, shifting focus toward live coding demonstrations and interactive problem-solving to break up the lecture format and enhance engagement.
- **Curriculum Modernization:** Feedback has highlighted the importance of using current industry tools. I have transitioned course materials to focus on modern pipelines (e.g., Unity and current VR SDKs) rather than legacy software.
- **Balancing Theory and Practice:** In **CTCH/DES 312**, while students appreciated the theoretical depth, some requested more foundational Unity tutorials before the final project. In response, I provided supplementary Unity documentation to support their technical learning and extended project deadlines when I observed students struggling to balance the workload.
- **Group Work:** While many students appreciated collaborative activities, some expressed a preference for independent work. I now offer a mix of individual and group assessments where possible to accommodate different learning styles.
